

Mansi Fartiyal

Data Analyst — SQL — Python — Power BI — Excel

Professional Summary

Data Analyst skilled in SQL, Python, Power BI, and Excel with experience in customer analytics, data cleaning, exploratory data analysis (EDA), KPI tracking, dashboard development, and predictive modeling. Proven ability to analyze large datasets, identify business insights, and support data-driven decision-making through analytical solutions.

Education

B.Tech in Computer Science Engineering
Graphic Era Hill University, Bhimtal

2022 – 2026
CGPA: 8.3

Technical Skills

Programming: Python, SQL (MySQL, Joins, CTEs, Window Functions, Aggregations)

Data Analysis: Pandas, NumPy, Excel

Visualization: Power BI, Matplotlib

Tools: Git, Jupyter Notebook, VS Code, Linux

Concepts: Data Cleaning, EDA, KPI Development, Dashboarding, Statistical Analysis, Predictive Analytics

Projects

Credit Risk Dashboard and Segmentation

Power BI, Excel

- Built an interactive dashboard using 10,000+ banking records to analyze customer credit risk and financial trends.
- Developed KPI dashboards to monitor loan performance, customer segmentation, and default trends for business analysis.
- Used Excel for data cleaning, transformation, and analytical reporting.
- Delivered actionable insights to support financial decision-making and risk assessment strategies.

Customer Churn Prediction

Python, Pandas, Scikit-learn, Power BI

- Built a Random Forest model achieving an F1-score of 0.87 for customer churn prediction.
- Analyzed 7,000+ customer records using EDA, feature engineering, and statistical analysis.
- Identified key churn drivers through predictive analytics and created Power BI dashboards for customer retention insights.
- Generated business-focused insights to support engagement strategies and improve customer retention.

Sales and Customer Analytics using SQL

SQL, Power BI

- Analyzed 50,000+ sales records using SQL queries, joins, CTEs, and window functions.
- Built KPI reports to track revenue growth, customer retention, and regional sales performance.
- Performed customer segmentation and trend analysis using SQL-based data extraction and transformation techniques.
- Developed Power BI dashboards to visualize business insights and support strategic decision-making.

Automated Resume Analysis System

Python, Streamlit

- Developed a resume parsing system using NLP techniques for automated skill extraction and analysis.
- Implemented semantic matching between resumes and job descriptions to improve candidate screening accuracy.
- Automated resume evaluation workflows, reducing manual effort and improving recruitment efficiency.

Achievements

- Hackathon Finalist – Top 10 among 300+ participants in Code-A-Thon (WeCode).
- Mentored 30+ students under National Service Scheme (NSS), demonstrating leadership and communication skills.
- Certified Data Science, Machine Learning & Deep Learning Professional (Udemy).
- Presented research work at an IEEE co-sponsored conference.
