PROFESSIONAL SUMMARY

Data Analyst with expertise in Python, SQL, Excel, and Power BI, skilled in data cleaning, exploratory data analysis, dashboard development, and KPI reporting. Experienced in transforming complex datasets into actionable insights through data visualization and statistical analysis. Strong problem-solving abilities, attention to detail, and a passion for leveraging data to drive business decisions and improve performance.

EDUCATION

B.Tech in Computer Science Engineering

Graphic Era Hill University, Bhimtal

2022 – 2026

CGPA: 8.3/10

TECHNICAL SKILLS

Languages	Python, SQL (MySQL)
SQL Skills	Joins, CTEs, Window Functions, Aggregations, Subqueries
Libraries	Pandas, NumPy, Scikit-Learn, Matplotlib
Visualization	Power BI, Excel (Power Query, Pivot Tables, Charts)
Tools	Git, GitHub, Jupyter Notebook, VS Code, Streamlit
Concepts	EDA, Data Cleaning, KPI Development, Statistical Analysis, Predictive Modeling, Customer Segmentation

PROJECTS

Credit Risk Analysis Dashboard | *Power BI, Excel*

GitHub

- Cleaned and transformed **10,000+ banking records** using Excel Power Query, ensuring data accuracy for analysis.
- Built interactive Power BI dashboards covering loan performance, repayment behavior, and borrower risk segmentation.
- Defined KPIs — default rate, approval rate, loan distribution, and risk score — to support credit decisions.
- Enabled faster risk identification by visualizing high-risk borrower patterns across customer segments.

Customer Churn Prediction | *Python, Scikit-Learn*

GitHub

- Trained a Random Forest classifier on **7,000+ customer records**, achieving an **F1-score of 0.87**.
- Engineered features and resolved missing values to improve data quality and boost model accuracy.
- Identified contract type, monthly charges, and tenure as the top 3 churn drivers via feature importance analysis.
- Delivered churn segment dashboards in Power BI to support targeted customer retention campaigns.

Sales and Customer Analytics | *SQL, Power BI*

GitHub

- Performed end-to-end sales analysis on **9,694 transaction records** using MySQL and Power BI.
- Wrote advanced SQL queries using aggregations, CTEs, CASE statements, and date functions to extract actionable business insights.
- Designed an interactive dashboard to track key metrics including Total Sales, Profit, Orders, and Customer Performance.
- Conducted customer segmentation and category-level analysis to identify high-value customers and top revenue-generating product categories.

ATS Resume Analysis System | *Python, Streamlit, Gemini API*

GitHub

- Built an AI resume screening tool that parses resumes and scores them against job descriptions automatically.
- Extracted skills and keywords using NLP techniques to generate structured candidate profiles.
- Integrated Gemini API to produce ATS compatibility scores and actionable improvement recommendations.
- Deployed a Streamlit interface accessible to both recruiters and candidates for real-time resume evaluation.

ACHIEVEMENTS & CERTIFICATIONS

- Authored a review research paper titled “**Artificial Intelligence in Disease Detection**” and communicated its findings at an IEEE Co-Sponsored International Conference.
- Maintained strong academic consistency throughout the B.Tech program with a current **CGPA of 8.3/10**.
- Solved **150+ DSA and SQL problems** on LeetCode, demonstrating strong analytical and problem-solving skills.
- Top 10 Finalist** among 300+ participants in Code-A-Thon (WeCode Hackathon).
- Completed certifications in **Data Science and Machine Learning** from Udemy.
- Mentored **30+ students** under the National Service Scheme (NSS), demonstrating leadership, communication, and team-work skills.
